Disclaimer

Paladin Blockchain Security ("Paladin") has conducted an independent audit to verify the integrity of and highlight any vulnerabilities or errors, intentional or unintentional, that may be present in the codes that were provided for the scope of this audit. This audit report does not constitute agreement, acceptance or advocacy for the Project that was audited, and users relying on this audit report should not consider this as having any merit for financial advice in any shape, form or nature. The contracts audited do not account for any economic developments that may be pursued by the Project in question, and that the veracity of the findings thus presented in this report relate solely to the proficiency, competence, aptitude and discretion of our independent auditors, who make no guarantees nor assurance that the contracts are completely free of exploits, bugs, vulnerabilities or deprecation of technologies. Further, this audit report shall not be disclosed nor transmitted to any persons or parties on any objective, goal or justification without due written assent, acquiescence or approval by Paladin.

All information provided in this report does not constitute financial or investment advice, nor should it be used to signal that any persons reading this report should invest their funds without sufficient individual due diligence regardless of the findings presented in this report. Information is provided 'as is', and Paladin is under no covenant to the completeness, accuracy or solidity of the contracts audited. In no event will Paladin or its partners, employees, agents or parties related to the provision of this audit report be liable to any parties for, or lack thereof, decisions and/or actions with regards to the information provided in this audit report.

Cryptocurrencies and any technologies by extension directly or indirectly related to cryptocurrencies are highly volatile and speculative by nature. All reasonable due diligence and safeguards may yet be insufficient, and users should exercise considerable caution when participating in any shape or form in this nascent industry.

The audit report has made all reasonable attempts to provide clear and articulate recommendations to the Project team with respect to the rectification, amendment and/or revision of any highlighted issues, vulnerabilities or exploits within the contracts provided. It is the sole responsibility of the Project team to sufficiently test and perform checks, ensuring that the contracts are functioning as intended, specifically that the functions therein contained within said contracts have the desired intended effects, functionalities and outcomes of the Project team.

Paladin retains the right to re-use any and all knowledge and expertise gained during the audit process, including, but not limited to, vulnerabilities, bugs, or new attack vectors. Paladin is therefore allowed and expected to use this knowledge in subsequent audits and to inform any third party, who may or may not be our past or current clients, whose projects have similar vulnerabilities. Paladin is furthermore allowed to claim bug bounties from third-parties while doing so.

1 Overview

The EndpointV2 audit's final resolution commit (6356f0a31f2125267420e7bf8403b59a55459aa3) resides directly on the public LayerZero-v2 repository, making all 25 Solidity contract files in the audit scope publicly accessible and verifiable. This is the definitive reference point for the audited code.

As supplementary verification, all 25 files at this commit are also confirmed byte for byte identical to the current main branch. Two additional view-helper contracts (EndpointV2View.sol, EndpointV2ViewUpgradeable.sol) exist on main but are outside the audit scope.

SendUln302.sol and ReceiveUln302.sol are not in the EndpointV2 audit scope but are covered in the separate Paladin MessageLib Diff Audit Report.

NOTE: The main branch has a broader scope than 6356f0a, including additional contracts and features added after the audit. This report focuses on the audited scope at 6356f0a.

1.1 Summary

Original Audit	https://github.com/LayerZero-Labs/Audits/blob/main/audits/Endpoint%20V2%20-%20EVM/EndpointV2/EndpointV2-Paladin-15DEC2023.pdf (15 December 2023)
Public Repository	https://github.com/LayerZero-Labs/LayerZero-v2
Final Audited Commit	6356f0a31f2125267420e7bf8403b59a55459aa3

1.2 Scope

- Original audit scope: protocol/contracts/ at commit 6356f0a on <https://github.com/LayerZero-Labs/LayerZero-v2>
- Excluded from original audit: protocol/contracts/libs/messagelib/ExecutorOptions.sol, SimpleMessageLib.sol

1.3 Repository & Commit Trail

Phase	Repository	Commit	Path
Preliminary	monorepo (private)	bb86736	packages/layerzero-v2/evm/protocol/contracts
Resolution #1	monorepo (private)	fe287f0	same
Resolution #2	monorepo (private)	faf36d0	same
Resolution #3	LayerZero-v2 (public)	ccfd0d3	protocol/contracts
Resolution #4	LayerZero-v2 (public)	ccfd0d3	same
Resolution #5	LayerZero-v2 (public)	4b29859	same
Resolution #6 (FINAL)	LayerZero-v2 (public)	6356f0a	same

The audit transitioned from the private monorepo to the public LayerZero-v2 repository at Resolution #3. The final four resolution commits are fully verifiable on the public repo.

1.4 Related Audit Reports

Contracts	Audit Report
SendUln302, ReceiveUln302, UlnBase, SendLibBase, and other message library contracts	MessageLib Diff Audit Report
DVN (VerifierNetwork), MultiSig, DVNFeeLib, Worker	DVN Diff Audit Report

1.5 Deployed Contract Addresses

The following deployment addresses are documented in the original Paladin audit report:

Chain	EndpointV2 Address
Most chains (Ethereum, etc.)	0x1a44076050125825900e736c501f859c50fE728c
ZkSync	0xd07C30aF3Ff30D96BDc9c6044958230Eb797DDBF
Meter	0xef02BacD67C0AB45510927749009F6B9ffCE0631
Shimmer	0x148f693af10ddfaE81cDdb36F4c93B31A90076e1

Important: Per the original audit report: BB1, Conflux, DKF, Rarible, Tomo, XPla and ZkSync contracts do not match the ETH deployment.

2 Contract Verification Results

2.1 Main Contracts

Contract File	Role in Audit	Verification Result
EndpointV2.sol	Main contract	Identical
MessageLibManager.sol	Dependency	Identical
MessagingChannel.sol	Dependency	Identical
MessagingComposer.sol	Dependency	Identical
MessagingContext.sol	Dependency	Identical

2.2 Interfaces

Contract File	Role in Audit	Verification Result
ILayerZeroComposer.sol	Interface	Identical
ILayerZeroEndpointV2.sol	Interface	Identical
ILayerZeroReceiver.sol	Interface	Identical
IMessageLib.sol	Interface	Identical
IMessageLibManager.sol	Interface	Identical
IMessagingChannel.sol	Interface	Identical
IMessagingComposer.sol	Interface	Identical
IMessagingContext.sol	Interface	Identical
ISendLib.sol	Interface	Identical

2.3 Libraries

Contract File	Role in Audit	Verification Result
AddressCast.sol	Library	Identical
CalldataBytesLib.sol	Library	Identical
Errors.sol	Library	Identical
GUID.sol	Library	Identical
Transfer.sol	Library	Identical

2.4 MessageLib Contracts

Contract File	Role in Audit	Verification Result
BlockedMessageLib.sol	MessageLib	Identical
SimpleMessageLib.sol	MessageLib	Identical
BitMaps.sol	MessageLib utility	Identical
ExecutorOptions.sol	MessageLib utility	Identical
PacketV1Codec.sol	MessageLib codec	Identical

2.5 Additional Contracts on Main Branch

Contract File	Role in Audit	Verification Result
EndpointV2Alt.sol	Alternative endpoint	Identical (present at audit commit)
EndpointV2View.sol	View-only proxy helper	+ NEW (post-audit addition)
EndpointV2ViewUpgradeable.sol	Upgradeable view helper	+ NEW (post-audit addition)

The EndpointV2View contracts are read-only helper contracts that do not modify any protocol state or logic. They are wrapper contracts that call view functions on the existing EndpointV2 contract.
